AMENDMENTS TO THE CLAIMS

1. (Presently Amended) A method for network document processing, the method comprising:

locating a connection to a document processing device on said network, and
activating a first interface between said document processing device and a
workstation whereby said workstation can access a plurality of operational setting of
said document processing device;

providing a user interface to said workstation, whereby a user can through
said user interface and said first interface select operational setting for said the
document processing device;

generating a document data file at a particular location; and

communicating said particular location of the said document data file to the
~~predetermined~~ said document processing device, ~~thereby and~~ activating a document
processing job to be executed in accordance with operational settings selected by
the said user.

2. (Original) The method of claim 1, wherein activating an interface further
comprises launching a document processing client in response to a document
processing request by the user.

3. (Previously presented) The method of claim 1, wherein activating an interface
further comprises launching and retrieving web pages to display capabilities of the
document processing device.

4. (Original) The method of claim 1, wherein the user interface is a web page.

5. (Original) The method of claim 1, wherein generating a document data file further comprises storing the document data file on a job file store.
6. (Original) The method of claim 1, wherein communicating a location further comprises sending a Uniform Resource Locator to the predetermined document-processing device.
7. (Original) The method of claim 1, wherein the auxiliary information includes size of the document data file, and the operational settings specified by the user.
8. (Original) The method of claim 1, wherein the document processing device is one of the group comprising: a printer, a fax machine, a multi-function peripheral, an electronic document management system, a plotter, a network fax machine, a language translation server and a knowledge management system.
9. (Previously presented) A computer-readable medium including software code that, when executed, results in executing the method recited in claim 1.
10. (Original) The computer-readable medium of claim 9, wherein the computer-readable medium is a downloadable file.
11. (Original) The computer-readable medium of claim 9, wherein the computer-readable medium is a generic printer driver installed on each workstation of a network.

12. (Presently amended) A network document processing system, comprising:
- a generic document processing client installed on ~~at least one~~ a workstation connected to a network, ~~wherein the~~ said document processing client being is operable to interact with several different types of document processing devices;
 - a job file store, operable to receive document data files generated by the said generic document processing client; and
 - ~~at least one~~ a document-processing device, operable to receive a location of the document data files and auxiliary information associated with each document data file from the said document-processing client, and to operate on said document data file in accordance with said auxiliary information.

13. (Original) The system of claim 12, wherein the document-processing client is one of the group comprised of: a printer client, a fax client, an electronic document management system client, a language translation client, and a knowledge system management client.

14. (Original) The system of claim 12, wherein the job file store is located on the workstation upon which is installed the document processing client.

15. (Original) The system of claim 12, wherein the job file store is located on another device connected to the network.

16. (Original) The system of claim 12, wherein the job file store is a dedicated device.

17. (Original) The system of claim 12, wherein the document processing device is one of the group comprising: a printer, a fax machine, a multi-function peripheral, an electronic document management system, a plotter, a network fax machine, a language translation server, and a knowledge management system.

18. (Previously presented) The method of claim 1, wherein generating a document data file comprises generating a document data file based on the operational setting.

19. (Previously presented) The computer-readable medium of claim 9, wherein generation of a document data file comprises generation of a document data file based on the operational setting.

20. (Presently Amended) A method for network document processing, the method comprising:

 locating a connection to a document processing device, and
 activating a first interface between said document processing device and a workstation whereby ~~and~~ said workstation can access a plurality of operational setting of said document processing device;

 providing a user interface to said workstation, whereby a user can through said user interface and said first interface select operational setting for the document processing device;

 generating a document data file at a particular location; and
 communicating said particular location of the document data file to ~~the predetermined~~ said document processing device, thereby activating a document processing job to be executed in accordance with operational settings selected by the user.
